

## STAR~PLUS WIRELESS HANDHELD MODULE

### Real Time Data Collection & Updates!

The Star~Plus Wireless Handheld module is a fully-integrated solution that utilizes RF Units or PDAs. Mobile computers enable collection of critical business data and apply real-time updates, ensuring the right products are stocked at the right levels and at the right price. Capture and exchange data on the fly from almost anywhere in the store. Increase individual productivity while tracking inventory more efficiently and accurately. Combine a PDA with a mobile printer to print shelf labels on the spot.

### Lower Costs

- Reduce Inventory Overs and Shorts
  - Tighten control of inventory by creating orders with an up-to-date inventory count
  - Streamline receiving and DSD
  - Ensure instant access to relevant information
- Decrease pricing errors
  - Verify prices and update in real-time
  - Ensure price integrity from shelf to cash register
- Ensure accuracy
  - Remotely monitor cashiers
  - Security through password protection

### Save Time

- Optimize Productivity of Key Personnel
  - Print labels on the spot with a mobile printer<sup>1</sup>
  - Count and receive inventory in real time – no redundant data entry
  - Send label items to the queue for printing<sup>1</sup>
- Decrease Transaction Time
  - Speed line-up time through cashier line busting<sup>1</sup>
